Features and Benefits

Provides clostridial protection against eight clostridial diseases.

For vaccination of healthy cattle and sheep against diseases caused by *Cl. chauvoei*, *Cl. septicum*, *Cl. novyi* Type B, *C. haemolyticum* (known elsewhere as *Cl. novyi* Type D), *Cl. tetani* and *Cl. perfringens* Types C & D.

Easy-to-use delivery system offers the highest level of convenience while minimizing the chances for contamination.

Antigens produced by Electroferm®, electronically-controlled deep culture process.

Packaging is highly flexible, stackable and collapsible for easier use, storage and disposal.

Indications

For the vaccination of healthy cattle and sheep against diseases caused by *Clostridium chauvoei*, *Cl. septicum*, *Cl. novyi* Type B, *Cl. haemolyticum* (known elsewhere as *Cl. novyi* Type D), *Cl. tetani* and *Cl. perfringens* Types C and D.

Although *Clostridium perfringens* Type B is not considered a significant problem in the U.S.A., immunity may be provided against the beta and epsilon toxins elaborated by *Cl. perfringens* Type B. The immunity is derived from the combination of Type C (beta) and Type D (epsilon) fractions.

Dosage

For further information including dose rate and complete directions and warnings, please see the Product Label.
